Education

Monash University — Clayton, VIC
Bachelor of Computer Science (Advanced Computer Science) — Expected [Month Year]
GPA: [x.xx] / 4.0 **WAM:** [xx.xx]

Experience

Latch – AI Lease Checker for International Students — Melbourne, VIC
Legal Data & Privacy Lead (University Startup Project, team of 4) — 2026

- Co-developed an AI tool that checks rental leases against Victorian law and tells international students, in their own language, whether to sign, ask questions first or walk away.
- Owned the legal data and privacy layer: personal details are redacted before anything is stored, and every flag must be backed by the exact section of the Residential Tenancies Act before a student sees it.
- Prototype caught a bond A$413 over the legal limit on a real lease; pitched a partner-funded model (free for students) projected to reach A$387k revenue by 2029.

BetaBuilders — Remote
Volunteer Web Development Intern (Part-time) — Sep 2026 – Present

- Built and launched PulseStack, a free habit app that learns when each user has the most energy over 14 days and suggests the best times for study or deep work.
- Wrote the app in TypeScript with unit tests (Vitest) and real-browser checks (Playwright), passing the FreeAppStore platform's compliance checks before public release.
- Designed for privacy: no account or subscription needed, and all user data stays in the browser.

ATLAS Simulations – Monash Innovation Guarantee — Clayton, VIC
Industry Innovation Program Participant — Jan 2026 – Feb 2026

- Co-designed a platform where students practise communication and problem-solving with an AI chatbot and earn a Letter of Recommendation, giving employers evidence of soft skills.
- Took the idea from concept to working prototype within a few weeks and pitched it to industry stakeholders.

Extra-curriculars

Monash Nexus for Emerging Technologies (MNET) — Clayton, VIC
Operations Team Member — Aug 2026 – Present

- Develop features for the club's member onboarding process in its internal Team Services platform (Next.js, TypeScript, PostgreSQL), which takes new recruits from accepted offer to active member.
- Contribute to onboarding steps such as Discord account linking and member profile completion, so leads can see where each new member is up to instead of chasing them manually.

Projects

TaskFlow – Team Task Management App | *React, Spring Boot, PostgreSQL* — GitHub

- Built and deployed a full-stack Kanban app where teams create, assign and track tasks with drag-and-drop; changes appear instantly and save automatically.
- Secured 8 REST endpoints with JWT login and packaged the database, API and frontend into Docker containers so the whole app starts with one command.

Campus Ride-Sharing Web App – University Capstone | *Next.js, Tailwind CSS, PostgreSQL*

- Built a ride-sharing app in a team of four to help Monash students and staff travel between campuses affordably, working on both frontend and backend.
- Co-wrote the project plan (Gantt chart, schedule, milestones) and delivered in agile sprints using Git.

Event Management Android App | *Java, Android SDK, GSON* — GitHub

- Built an Android app for event organisers to sign in, create categories and manage events, with data saved on the device and layouts that adapt to portrait and landscape.
